Profile

I'm a Cloud Architect with strong expertise in designing and building cloud solutions on AWS, Azure, and GCP. I create cloud-native applications and build resilient infrastructure, with a focus on AWS and Azure. I have extensive hands-on experience transforming systems and designing applications that are fault-tolerant, highly scalable, and always available.

I've learned to quickly identify problems and develop creative solutions. I know when to apply technology and when to implement the right processes and procedures. I love automating manual tasks and always aim for simplicity.

I work closely with development teams on application deployment, configuration management, and infrastructure orchestration. I'm especially interested in platform engineering and how cloud-native patterns can improve developer workflows

I also conduct training sessions for developers to help them understand Kubernetes, rewrite their applications to work with Kubernetes, and successfully migrate their apps to the platform.

When I'm not working with cutting-edge technology, you'll find me cooking spicy Indian food or reading a book.

Professional Background

Senior Cloud Architect Storebrand Livsforsikring

📅 04/2021 – present 📍 OSLO, NORWAY

- Working with platform architects and developers to design and build a developer experience platform, and build good team culture.
- Acting as the platform architect, defining the strategy and technical design for moving the organization to containerized systems, and led the modernization of applications for containers.
- Led large-scale cloud migrations, moving over 500 applications from on-premises data centers to 20+ Azure Kubernetes Service (AKS) clusters.
- Served as the primary platform architect for 20+ AKS clusters, responsible for the architecture, reliability, security, and operational standards of all workloads.
- Worked with stakeholders during migrations to keep things running smoothly.
- Deployed and managed Azure resources using Infrastructure as Code (IaC) tools including Bicep and Terraform.

Professional Background

- Developed and implemented a migration strategy for Azure, alongside establishing a cloud governance model for a global enterprise.
- Designed a secure multi-subscription architecture to support the migration of numerous applications to Azure Kubernetes Service.
- Built logging and monitoring solutions for both applications and infrastructure.
- Developed cost optimization strategies for Azure and AKS to improve operational efficiency.
- Implemented GitOps-based application delivery on AKS using Flux and ArgoCD for automated deployments.
- Implemented cloud governance practices to ensure we stayed compliant with security standards and followed company policies.
- Worked with IAM to manage identities, control access, and enforce least-privilege principles across Azure.

DevOps and Cloud-Native consultant SpareBank 1 Utvikling (CGI)

📅 11/2019 – 03/2021 📍 OSLO, NORWAY

- Architected AWS Multi-Account infrastructure tailored for banking applications, with focus on security and compliance.
- Used Terraform, with Atlantis handling CI.
- Automated AMI creation using HashiCorp's Packer, to speed up deployments.
- Utilized AWS Fargate for setting up CI tool Atlantis, for faster container deployments.
- Provided guidance and support to development teams in adopting AWS and DevOps best practices.
- Developed and implemented cloud custodian policies to enforce governance over infrastructure resources.
- Developed a custom account vending machine using Python3 and boto3 to automate the creation of AWS accounts, complete with required configurations like prebuilt network and security settings, to simplify AWS account management.
- Proficient in version control systems such as Github and Gitlab.
- Experienced in containerization technologies like Docker and ECS.
- Skilled in scripting languages including Shell and Python for automation tasks.
- Proficient user of project management and collaboration tools such as Jira, Slack, and Confluence.
- Designed and implemented a microservices-based architecture for cloud-native applications.
- Developed a comprehensive DevOps pipeline to automate the build, deployment, and monitoring of applications.
- Implemented self-healing architectures to ensure automatic recovery from system failures.

DevOps Engineer Payr AS

📅 11/2018 – 10/2019 📍 OSLO, NORWAY

- Established Kubernetes clusters on the Google Cloud Platform (GCP), for container deployments.
- Configured microservices architecture using Istio on Kubernetes, enabling in-cluster encryption and service communication.
- Established GitLab as an in-house source code management tool for version control.
- Implemented CI/CD pipelines using GitLab CI for backend applications and Bitrise for

Professional Background

mobile apps, for automated software delivery.

- Implemented live application monitoring and tracing using Istio and Stackdriver on the Google Cloud Platform (GCP), with alerts configured to catch issues early.
- Automated GCP infrastructure deployment and management using Terraform, to reduce manual work.
- Developed Python scripts to automate repetitive tasks.

DevOps Engineer

Siemens Technology and Services Pvt. Ltd.

📅 01/2018 – 10/2018 📍 PUNE, INDIA

- Utilized Gitlab-CI for Continuous Integration (CI) implementation.
- Helped the development team adopt DevOps practices, cutting deployment time from hours to minutes.
- Established and maintained an OpenShift Origin Cluster for efficient application deployment and management.
- Used Terraform for infrastructure automation, for faster deployments.
- Demonstrated proficiency in AWS infrastructure architecture, successfully provisioning multiple development projects.
- Configured Build and Deployment status notifier integration with Slack within an OpenShift environment.
- Implemented live application monitoring using Prometheus, Grafana, and Slack integration to monitor application performance.

Cloud Engineer

Blazeclan Technologies Pvt. Ltd.

📅 06/2016 – 12/2017 📍 PUNE, INDIA

- Migrated on-premises applications to AWS Cloud within a tight timeline of just 120 days, cutting costs significantly.
- Established and configured Jenkins Server, for CI/CD pipelines across multiple development projects.
- Implemented infrastructure automation using AWS CloudFormation and Terraform, for faster, scalable deployments.
- Managed, improved, and monitored cloud infrastructure on AWS, including backups, patches, and scaling.
- Automated build and deployment procedures using Jenkins to reduce errors and speed up releases.
- Implemented automated AMI creation using Packer for both Ubuntu and CentOS environments.
- Implemented Continuous Deployment strategies including in-place and blue-green deployments, with zero downtime.
- Used Docker, AWS Lambda, and API Gateway for deploying microservices, improving scalability.
- Developed Python (boto3) scripts for AWS Infrastructure tagging for cost optimization.

Education

Bachelor of Engineering in Information Technology University Of Pune

📅 06/2013 – 05/2016 📍 PUNE, INDIA

Diploma in Computer Technology Maharashtra State Board of Technical Education, Mumbai

📅 06/2010 – 05/2013 📍 AHMEDNAGAR, INDIA
